November 4, 2019

Joe Chiodo, CPA, MBA
Finance Director
Town of Johnston, Rhode Island Police and Firefighters Pension System
1385 Hartford Avenue
Johnston, Rhode Island 02919

Dear Board Members:

We are pleased to submit this Actuarial Valuation and Review as of June 30, 2019. It summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirements for the fiscal year ending June 30, 2021.

This report was prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist in administering the Pension System. The census information on which our calculations were based was prepared by the staff of the Town of Johnston and the financial information was obtained from the Town of Johnston trial balance and journal entries for the fiscal year ended June 30, 2019. That assistance is gratefully acknowledged.

The actuarial calculations were directed under our supervision. We are members of the American Academy of Actuaries and we meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of our knowledge, the information supplied in this actuarial valuation is complete and accurate. Further, in our opinion, the assumptions recommended by Segal in our experience study for the period July 1, 2014 to June 30, 2017, dated November 30, 2017, as approved by the Town are reasonably related to the experience of and the expectations for the System.

We look forward to reviewing this report at your next meeting and to answering any questions.

Sincerely,

Segal Consulting, a Member of The Segal Group, Inc.

Section 1: Actuarial Valuation Summary

Purpose and Basis

This report was prepared by Segal Consulting to present a valuation of the Town of Johnston, Rhode Island Police and Firefighters Pension System as of June 30, 2019. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits. The measurements shown in this actuarial valuation may not be applicable for other purposes. In particular, the measures herein are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligations. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

Certain disclosure information required by GASB Statements No 67 and 68 as of June 30, 2019 for the System is provided in a separate report.

The contribution requirements presented in this report are based on:

- The benefit provisions of the Pension System, as administered by the Town;
- The characteristics of covered active participants, retired participants and beneficiaries as of June 30, 2019, provided by the Town;
- The assets of the Plan as of June 30, 2019, provided by the Town;
- Economic assumptions regarding future salary increases and investment earnings;
- Other actuarial assumptions regarding employee terminations, retirement, death, etc. and
- The funding policy adopted by the Town.

Significant Issues

1. Segal Consulting (“Segal”) strongly recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the unfunded actuarial accrued liability and the principal balance. The funding policy adopted by the Town as outlined in the 2017 settlement agreement meets this standard.
2. Under the settlement agreement, the employer contribution for the fiscal year ending June 30, 2017 could not be less than \$8,500,000, with this amount increasing 3.00% per year. The contribution for the fiscal year ending June 30, 2021 is \$9,566,825, an increase of \$278,645 from last year. The change is due to the required 3.0% increase outlined in the settlement agreement. A schedule of the contributions for the next 20 years is reflected in Section 3, Exhibit F. Actual contributions made during the fiscal year ending June 30, 2019 were \$9,017,650. In the prior fiscal year, actual contributions were \$8,756,200.
3. Beginning with the fiscal year ending June 30, 2019, the actuarially determined contribution amount was changed to match the required contributions under the settlement agreement. Prior to this, the actuarially determined contribution was based on a level dollar closed period. The Town of Johnston has paid 100% of the actuarially determined contribution for the fiscal year ending June 30, 2019.
4. The actuarial value of assets for the System is equal to market value.
5. The effective amortization period for the unfunded actuarial accrued liability is 25.87 years, a decrease from 27.16 years in the prior valuation.
6. The unfunded actuarial accrued liability is \$111,514,179, which is an increase of \$13,227 since the prior valuation. The funded ratio (the ratio of the actuarial value of assets to actuarial accrued liability) is 29.10%, compared to the prior year funded ratio of 28.32%. This ratio is one measure of funding status, and its history is a measure of funding progress. These measurements are not necessarily appropriate for assessing the sufficiency of the System’s assets to cover the estimated cost of settling the System’s benefit obligation or the need for or the amount of future contributions.
7. The actuarial gain from investment and other experience is \$623,229 or 0.4% of actuarial accrued liability.
8. The rate of return on the actuarial and market value of assets was 3.68% for the July 1, 2018 to June 30, 2019 plan year. This resulted in an actuarial loss of \$1,574,451, or 1.0% of the actuarial accrued liability.
9. The net experience gain from sources other than investment experience was 1.4% of the actuarial accrued liability. This gain was primarily due to mortality and disability experience different than expected.
10. There were no changes in actuarial assumptions or plan provisions since the last valuation.

11. This report constitutes an actuarial valuation for the purpose of determining the actuarially determined contribution under the System's funding policy and measuring the progress of that funding policy. The Net Pension Liability (NPL) and Pension Expense under Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68, for inclusion in the plan and employer's financial statements as of June 30, 2019, were provided separately. This actuarial report as of June 30, 2019 is based on financial and demographic data as of that date. Changes subsequent to that date are not reflected and will affect future actuarial costs of the plan.
12. This actuarial report as of June 30, 2019 is based on financial and demographic data as of that date. Changes subsequent to that date are not reflected and will affect future actuarial costs of the plan
13. Since the actuarial valuation results are dependent on a given set of assumptions, there is a risk that emerging results may differ significantly as actual experience proves to be different from the assumptions. We have included a discussion of various risks that may affect the Plan in Section 2.

Summary of Key Valuation Results

		2019	2018
Contributions for plan year beginning July 1*:	<ul style="list-style-type: none"> Actuarially determined employer contributions 	\$9,566,825	\$9,288,180

*The amounts shown in the 2019 and 2018 columns are payable for the fiscal years ending in 2021 and 2020, respectively.

Important Information About Actuarial Valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal Consulting (“Segal”) relies on a number of input items. These include:

Plan of benefits	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Participant data	An actuarial valuation for a plan is based on data provided to the actuary by the Town. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Assets	The valuation is based on the market value of assets as of the valuation date, as provided by the Town.
Actuarial assumptions	In preparing an actuarial valuation, Segal projects the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This projection requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of each participant for each year. In addition, the benefits projected to be paid for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The projected benefits are then discounted to a present value, based on the assumed rate of return that is expected to be achieved on the plan’s assets. There is a reasonable range for each assumption used in the projection and the results may vary materially based on which assumptions are selected. It is important for any user of an actuarial valuation to understand this concept. Actuarial assumptions are periodically reviewed to ensure that future valuations reflect emerging plan experience. While future changes in actuarial assumptions may have a significant impact on the reported results, that does not mean that the previous assumptions were unreasonable.

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

- The actuarial valuation is prepared at the request of the Town. Segal is not responsible for the use or misuse of its report, particularly by any other party.
- An actuarial valuation is a measurement of the plan's assets and liabilities at a specific date. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.
- Actuarial results in this report are not rounded, but that does not imply precision.
- If the Town is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.
- Segal does not provide investment, legal, accounting, or tax advice. Segal's valuation is based on our understanding of applicable guidance in these areas and of the plan's provisions, but they may be subject to alternative interpretations. The Town should look to their other advisors for expertise in these areas.

As Segal Consulting has no discretionary authority with respect to the management or assets of the System, it is not a fiduciary in its capacity as actuaries and consultants with respect to the System.

Section 2: Actuarial Valuation Results

Participant Data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered participants, including active participants, retired participants, and beneficiaries.

This section presents a summary of significant statistical data on these participant groups. The plan has been closed to new firefighters since July 1, 1999 and new police participants since July 1, 2010 as shown by the declining active count.

More detailed information for this valuation year and the preceding valuation can be found in *Section 3, Exhibits A, B, and C*.

PARTICIPANT POPULATION: 2009 – 2019

Year Ended June 30	Active Participants	Retired Participants and Beneficiaries*	Ratio of Non-Actives to Actives
2009	115	154	1.34
2011	109	167	1.53
2012	108	168	1.56
2013	95	176	1.85
2014	86	182	2.12
2015	85	181	2.13
2016	76	189	2.49
2017	71	195	2.75
2018	68	196	2.88
2019	66	198	3.00

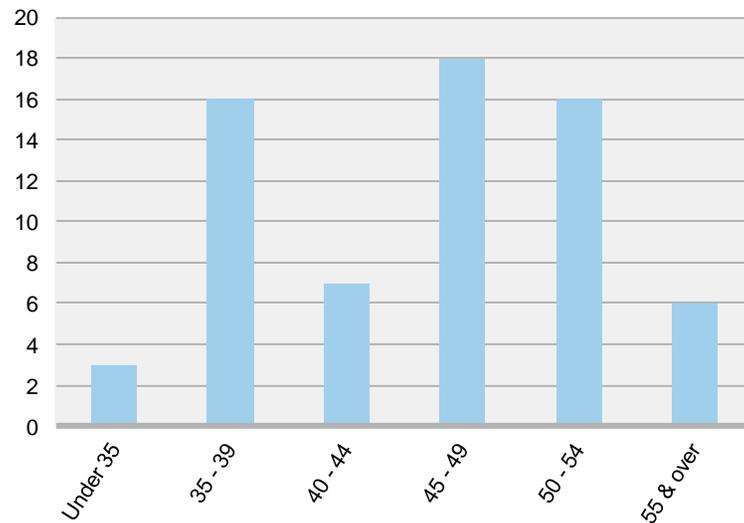

*Includes disabled retirees and QDROs

Active Participants

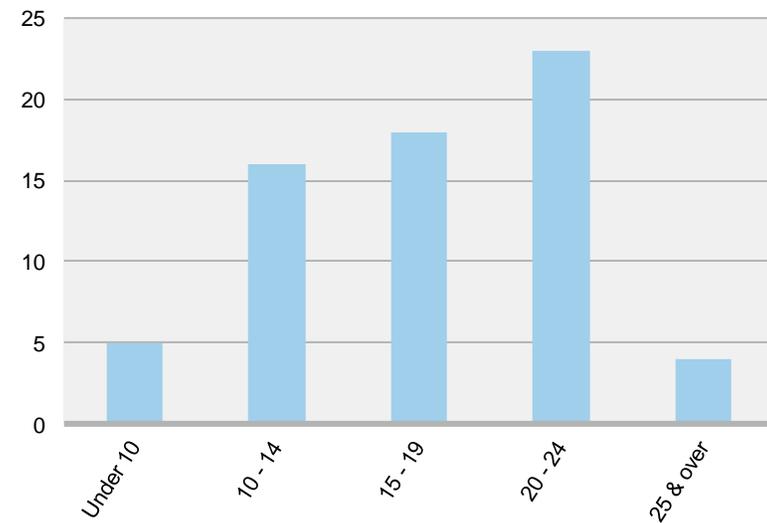

Plan costs are affected by the age, years of service and payroll of active participants. In this year's valuation, there were 66 active participants with an average age of 46.3, average years of service of 17.8 years and average payroll of \$102,730. The 68 active participants in the prior valuation had an average age of 45.5, average service of 16.8 years and average payroll of \$100,147.

Distribution of Active Participants as of June 30, 2019

ACTIVES BY AGE

ACTIVES BY YEARS OF SERVICE

Inactive Participants

In this year's valuation, there were no participants with a vested right to a deferred or immediate vested benefit.

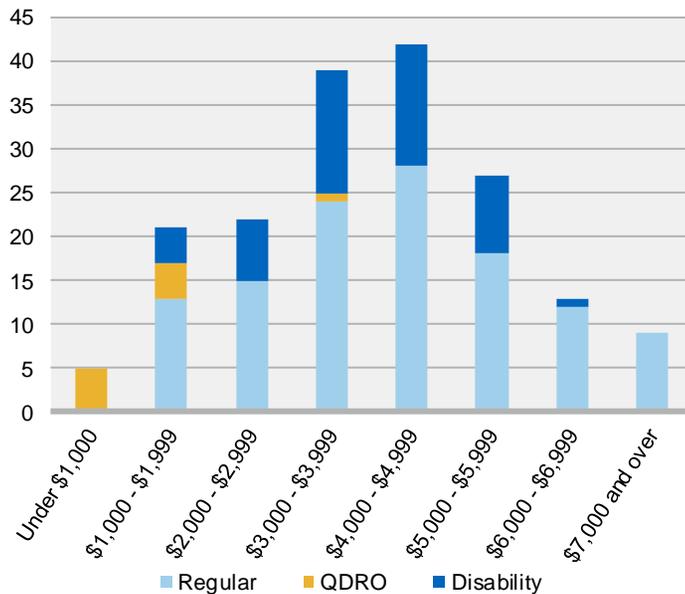

Retired Participants and Beneficiaries

As of June 30, 2019, 178 retired participants (including ten QDROs) and 20 beneficiaries were receiving total monthly benefits of \$768,356. For comparison, in the previous valuation, there were 178 retired participants (including nine QDROs) and 18 beneficiaries receiving monthly benefits of \$771,101.

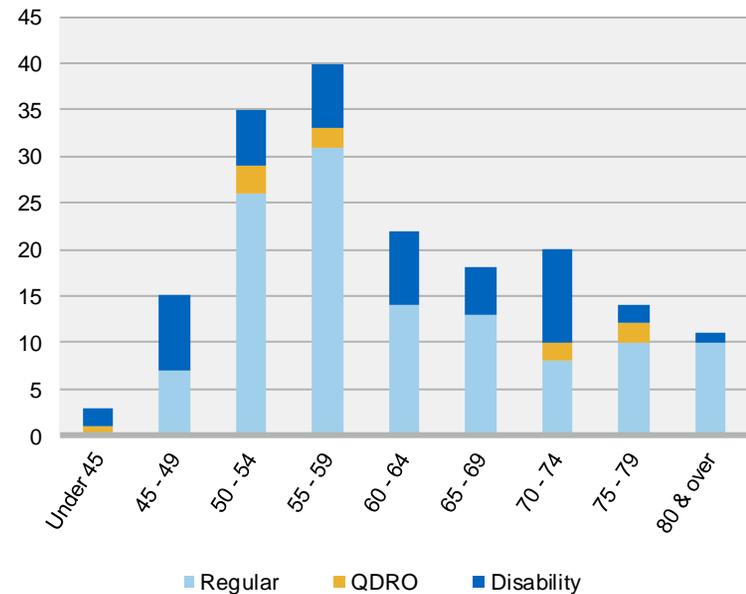

As of June 30, 2019, the average monthly benefit for retired participants is \$4,048, compared to \$4,103 in the previous valuation. The average age for retired participants is 61.5 in the current valuation, compared with 60.5 in the prior valuation.

Distribution of Pensioners as of June 30, 2019

PENSIONERS BY TYPE AND MONTHLY AMOUNT

PENSIONERS BY TYPE AND AGE

Historical Plan Population

The chart below demonstrates the decrease of the active population over the last ten valuations. The chart also shows the growth among the retired population over the same time period.

PARTICIPANT DATA STATISTICS: 2009 – 2019

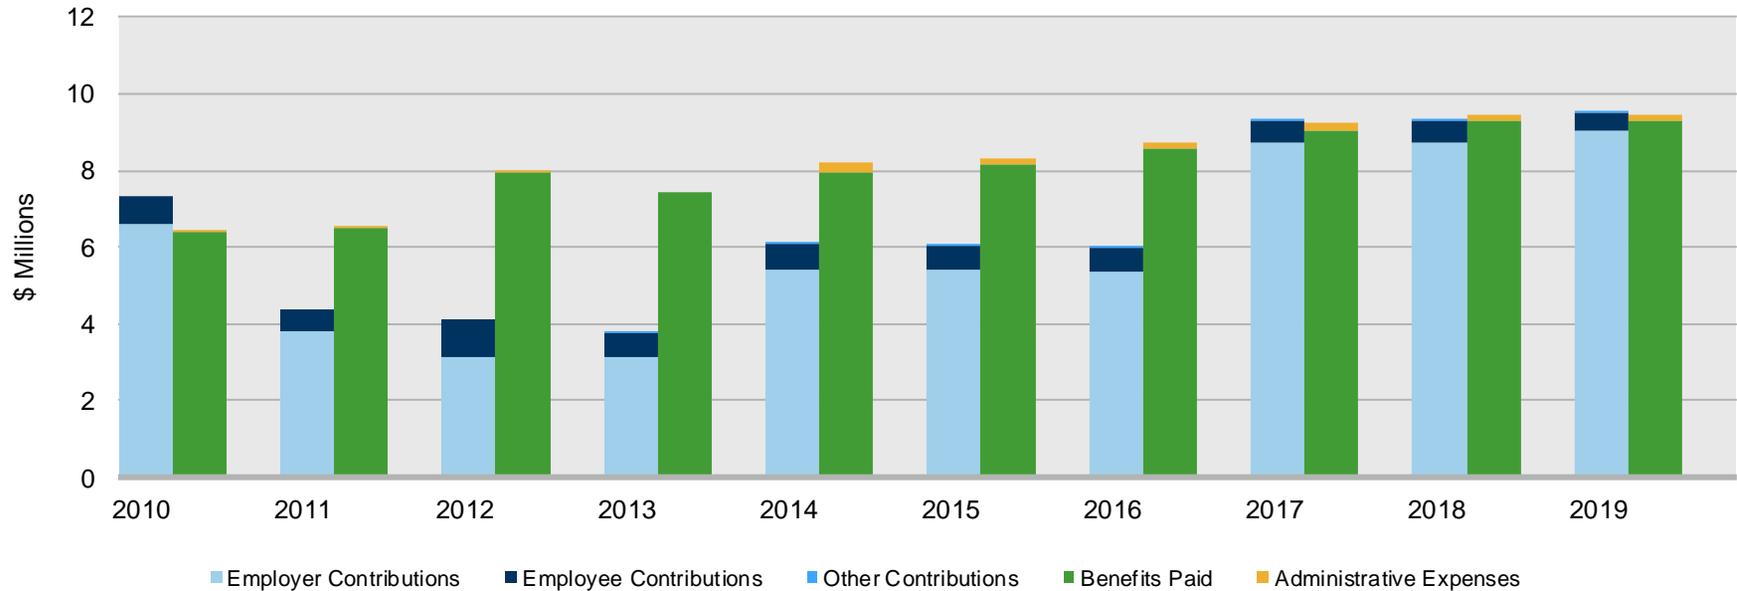

Year Ended June 30	Active Participants			Retired Participants and Beneficiaries		
	Count	Average Age	Average Service	Count	Average Age	Average Monthly Amount
2009	115	40.0	12.3	154	59.0	\$3,198
2011	109	40.6	12.6	167	58.0	3,366
2012	108	41.5	13.4	168	58.6	3,488
2013	95	41.9	13.6	176	59.0	3,497
2014	86	42.5	14.0	182	58.9	3,753
2015	85	43.4	15.0	181	59.6	3,826
2016	76	43.8	15.4	189	60.0	3,961
2017	71	44.5	15.9	195	60.6	4,007
2018	68	45.5	16.8	196	61.5	3,934
2019	66	46.3	17.8	198	62.5	3,881

Financial Information

Retirement plan funding anticipates that, over the long term, both contributions (less administrative expenses) and investment earnings (less investment fees) will be needed to cover benefit payments. Retirement plan assets change as a result of the net impact of these income and expense components.

Additional financial information, including a summary of transactions for the valuation year, is presented in *Section 3, Exhibits D. and E.*

**COMPARISON OF CONTRIBUTIONS MADE WITH BENEFITS AND EXPENSES PAID
FOR YEARS ENDED JUNE 30, 2010 – 2019**

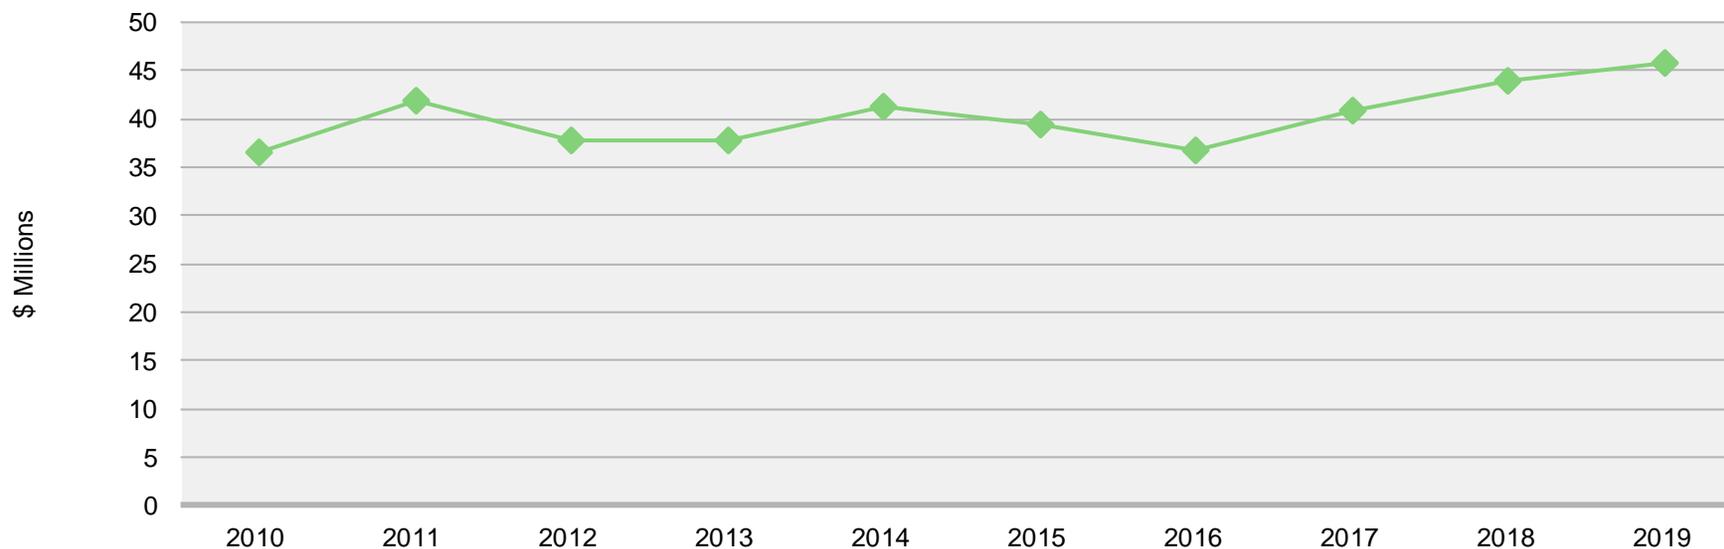

It is desirable to have level and predictable plan costs from one year to the next. However, the Town has approved an asset valuation method that uses market value. Under this valuation method, the full value of market fluctuation is recognized in a single year and, as a result, the asset value and the plan costs are relatively volatile.

DETERMINATION OF ACTUARIAL VALUE OF ASSETS FOR YEAR ENDED JUNE 30, 2019

Actuarial value of assets at beginning of year (equal to market value)	\$44,046,131
Employer contributions	9,017,650
Employee contributions	485,348
Purchase of service	35,280
Other income	1,797
Net investment income	1,622,294
Benefit payments	-9,313,919
Administrative expense	<u>-132,348</u>
Actuarial value of assets at end of year (equal to market value)	<u>\$45,762,233</u>

The actuarial value (equal to the market value of assets) is a representation of the System’s financial status. The actuarial asset value is significant because the System’s liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the unfunded actuarial accrued liability is an important element in determining the contribution requirement.

**ACTUARIAL VALUE OF ASSETS (EQUAL TO MARKET VALUE OF ASSETS)
AS OF JUNE 30, 2010 – 2019**

Actuarial Experience

To calculate any actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), any contribution requirement will decrease from the previous year. On the other hand, any contribution requirement will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years.

The total gain is \$623,229, which includes \$1,574,451 from investment losses and \$2,197,680 in gains from all other sources. The net experience variation from individual sources other than investments was 1.4% of the actuarial accrued liability. A discussion of the major components of the actuarial experience is on the following pages.

ACTUARIAL EXPERIENCE FOR YEAR ENDED JUNE 30, 2019

1	Net loss from investments*	-\$1,574,451
2	Net gain from administrative expenses	50,710
3	Net gain from other experience	2,146,970
4	Net experience gain: 1 + 2 + 3	\$623,229

*Details on next page.

Investment Experience

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the Town of Johnston’s investment policy. The rate of return on both an actuarial and market value of assets was 3.68% for the year ended June 30, 2019.

For valuation purposes, the assumed rate of return on the actuarial value of assets is 7.25%. Since the actual return for the year was less than the assumed return, the System experienced an actuarial loss during the year ended June 30, 2019 with regard to its investments.

INVESTMENT EXPERIENCE

	Year Ended June 30, 2019	Year Ended June 30, 2018
	Actuarial and Market Value	Actuarial and Market Value
1 Net investment income	\$1,622,294	\$3,326,607
2 Average value of assets	44,093,035	40,794,510
3 Rate of return: 1 ÷ 2	3.68%	8.15%
4 Assumed rate of return	7.25%	7.50%
5 Expected investment income: 2 x 4	3,196,745	3,059,588
6 Actuarial gain/(loss): 1 – 5	<u>-\$1,574,451</u>	<u>\$267,019</u>

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The chart below shows the rate of return on an actuarial basis for the last ten years, including averages over select time periods.

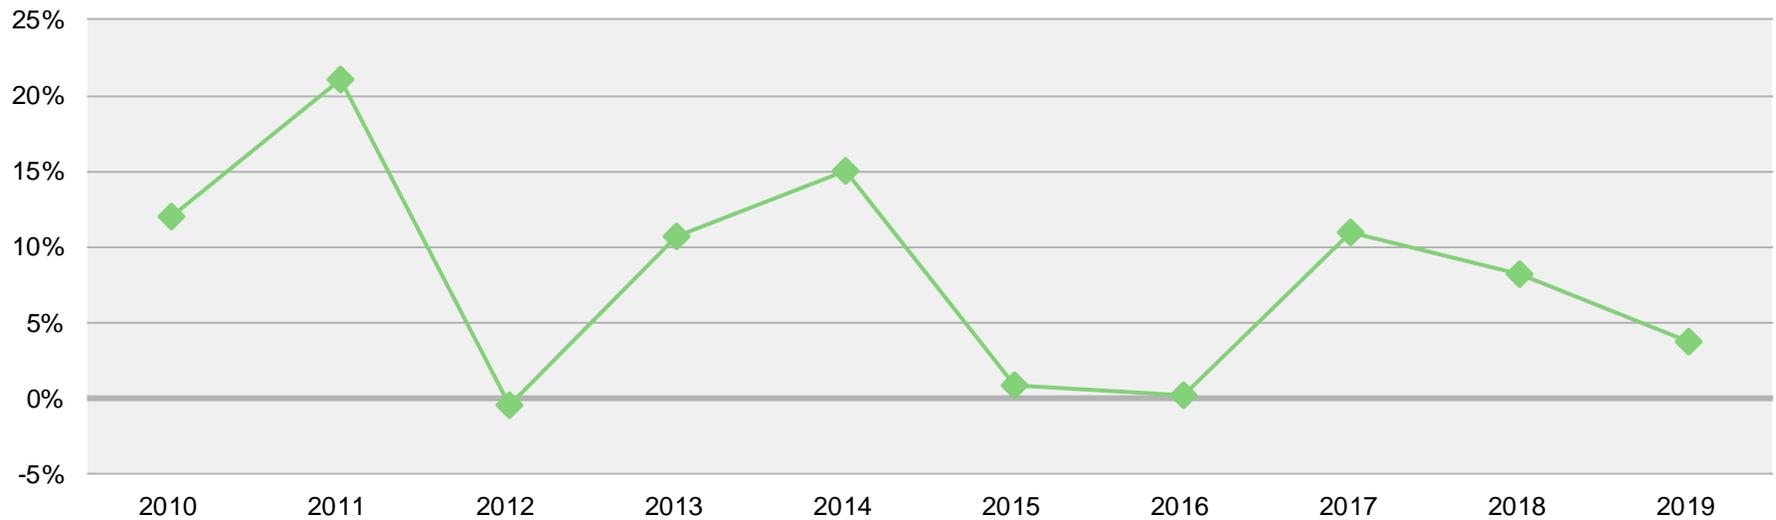

INVESTMENT RETURN – ACTUARIAL VALUE OF ASSETS (EQUAL TO MARKET VALUE OF ASSETS): 2010 - 2019

Actuarial and Market Value Investment Return		
Year Ended June 30	Amount	Percent
2010	\$3,841,298	11.95%
2011	7,463,380	21.08
2012	-218,756	-0.55
2013	3,841,617	10.71
2014	5,529,774	15.01
2015	341,030	0.85
2016	50,542	0.13
2017	4,037,715	10.98
2018	3,326,607	8.15
2019	1,622,294	3.68
Total	\$29,835,501	
	Most recent five-year average return	4.69%
	Most recent ten-year average return	7.85%

Note: Each year's yield is weighted by the average asset value in that year.

The actuarial value of assets has been equal to market value for the last ten years. This has resulted in relatively volatile actuarial rates of return and pension plan cost.

ACTUARIAL RATES OF RETURN (EQUAL TO MARKET VALUE RATES OF RETURN) FOR YEARS ENDED JUNE 30, 2010 - 2019

Administrative Expenses

Administrative expenses for the year ended June 30, 2019 totaled \$132,348 compared to the assumption of \$175,000, payable as of the beginning of the year. This resulted in a gain of \$50,710 for the year. Because it is expected that these expenses will increase, we have maintained the assumption of \$175,000 for the current year.

Other Experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- the extent of turnover among participants,
- retirement experience (earlier or later than projected),
- mortality (more or fewer deaths than projected),
- the number of disability retirements (more or fewer than projected), and
- salary increases (greater or smaller than projected).

The net gain from this other experience for the year ended June 30, 2019 amounted to \$2,146,970, which is 1.4% of the actuarial accrued liability.

LIABILITY CHANGES DUE TO DEMOGRAPHIC EXPERIENCE FOR YEAR ENDED JUNE 30, 2019

Changes in benefit amounts	\$128,535
Salary increases less than expected	323,869
Retirement experience different than expected	198,898
Mortality experience	1,951,875
Disability retirement experience different than expected	283,823
Miscellaneous	<u>-740,030</u>
Total	\$2,146,970

Changes in the Actuarial Accrued Liability

The actuarial accrued liability as of June 30, 2019 is \$157,276,412, an increase of \$1,729,329, or 1.1%, from the actuarial accrued liability as of the prior valuation date. The liability is expected to grow each year with normal cost and interest, and to decline due to benefit payments made. Additional fluctuations can occur due to actual experience that differs from expected (as discussed in the previous subsection).

Actuarial Assumptions

- There are no assumption changes reflected in this report.
- Details on actuarial assumptions and methods are in *Section 4, Exhibit I*.

Plan Provisions

- There were no changes in plan provisions since the prior valuation.
- A summary of plan provisions is in *Section 4, Exhibit II*.

Development of Unfunded Actuarial Accrued Liability

DEVELOPMENT FOR YEAR ENDED JUNE 30, 2019

1	Unfunded actuarial accrued liability at beginning of year	\$111,500,952
2	Total normal cost at beginning of year	2,273,697
3	Total contributions	-9,540,075
4	Interest	
	• For whole year on 1 + 2	\$8,248,662
	• For half year on 3	<u>-345,828</u>
	Total interest	<u>7,902,834</u>
5	Expected unfunded actuarial accrued liability	\$112,137,408
6	Change due to net experience gains and losses	<u>-\$623,229</u>
7	Unfunded actuarial accrued liability at end of year	<u>\$111,514,179</u>

Actuarially Determined Contribution

The actuarially determined contribution is based on settlement agreements whereby the employer contribution for the fiscal year ending June 30, 2017 could not be less than \$8,500,000 with this amount increasing 3.00% per year. For the fiscal year ending June 30, 2021, the actuarially determined contribution is \$9,566,825.

Based upon the required contribution of \$9,566,825, the unfunded actuarial accrued liability of \$111,514,179 as of June 30, 2019 is effectively being amortized over 25.87 years.

The contribution requirement for the fiscal year ending June 30, 2021 are based on the data previously described, the actuarial assumptions and plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

ACTUARIALLY DETERMINED CONTRIBUTION FOR YEAR BEGINNING JULY 1

	2019	2018
	Amount	Amount
1. Total normal cost	\$2,154,685	\$2,098,697
2. Administrative expenses	175,000	175,000
3. Expected employee contributions	<u>-534,383</u>	<u>-544,801</u>
4. Employer normal cost: (1) + (2) - (3)	\$1,795,302	\$1,728,896
5. Actuarial accrued liability	\$157,276,412	\$155,547,083
6. Actuarial value of assets	45,762,233	44,046,131
7. Unfunded actuarial accrued liability: (5) - (6)	\$111,514,179	\$111,500,952
8. Payment on unfunded/(overfunded) actuarial accrued liability	6,812,773	6,628,458
9. Adjustment for timing*	<u>958,750</u>	<u>930,826</u>
10. Total recommended contribution: (4) + (8) + (9)	<u>\$9,566,825</u>	<u>\$9,288,180</u>

*Actuarially determined contributions are assumed to be paid at the middle of the next fiscal year.

History of Employer Contributions

A history of the most recent years of contributions is shown below.

The Actuarially Determined Contribution (ADEC) is based on an actuarial valuation as of two years prior to the Fiscal Year End. With the adoption of the Funding Improvement Plan as of June 30, 2017, the ADEC shows a significant reduction between the Fiscal Year Ended June 30, 2018 and June 30, 2019.

HISTORY OF EMPLOYER CONTRIBUTIONS: 2011 – 2020

Fiscal Year Ended June 30	Actuarially Determined Employer Contribution (ADEC) ¹	Actual Employer Contribution ²	Percent Contributed
	Amount	Amount	
2011	\$9,271,954	\$3,785,547	40.83%
2012	9,596,472	2,926,827	30.50%
2013	9,925,723	3,118,405	31.42%
2014	12,959,095	5,417,483	41.80%
2015	12,910,527	5,406,640	41.88%
2016	13,805,159	5,360,260	38.83%
2017	15,028,231	8,721,128	58.03%
2018	15,939,806	8,756,200	54.93%
2019	9,017,650	9,017,650	100.00%
2020	9,288,180	--	--

¹The Actuarially Determined Contribution for years ending prior to June 30, 2018 were based on valuations performed prior to the implementation of the Funding Improvement Plan. See Exhibit F for a schedule of the Actuarially Determined Employer Contributions for the next 20 years.

²The Actual Employer Contributions meet the required amounts under the Funding Improvement Plan for years subsequent to June 30, 2018.

Risk

Since the actuarial valuation results are dependent on a given set of assumptions and data as of a specific date, there is a risk that emerging results may differ significantly as actual experience differs from the assumptions.

This report does not contain a detailed analysis of the potential range of future measurements, but does include a brief discussion of some risks that may affect the Plan. Upon request, a more detailed assessment of the risks can be provided to enable a better understanding of the risks inherent in the System. This assessment may include scenario testing, sensitivity testing, stress testing and stochastic modeling.

➤ Investment Risk (the risk that returns will be different than expected)

If the actual return on market value for the next Plan Year were 1% different from the assumed (either higher or lower), the projected unfunded actuarial liability would change by 0.41%, or about \$460,000.

The market value rate of return over the last ten years has ranged from a low of -0.55% to a high of 21.08%.

➤ Longevity Risk (the risk that mortality experience will be different than expected)

The actuarial valuation includes an expectation of future improvement in life expectancy. Emerging plan experience that does not match these expectations will result in either an increase or decrease in the actuarially determined contribution.

➤ Contribution Risk (the risk that actual contributions will be different from actuarially determined contribution)

The Police and Firefighters Pension System's funding policy requires payment of the actuarially determined contribution. As long as this policy is adhered to, contribution risk is negligible.

➤ Demographic Risk (the risk that participant experience will be different than assumed)

Examples of this risk include:

- Actual retirements occurring earlier or later than assumed. The value of retirement plan benefits is sensitive to the rate of benefit accruals and any early retirement subsidies that apply.
- More or less active participant turnover than assumed.

➤ Actual Experience Over the Last Ten Valuation Cycles and Implications for the Future

Past experience can help demonstrate the sensitivity of key results to the Pension System's actual experience. Over the past ten years:

The investment gain(loss) for a year has ranged from a loss of \$3,308,645 to a gain of \$6,067,983. If all investment returns were equal to the assumed return over the last ten years, the market value of assets as of the current valuation date would be approximately \$51,335,642 as opposed to the actual value of \$45,762,233.

The non-investment gain(loss) for a year has ranged from a loss of \$5,329,882 to a gain of \$6,036,186.

The funded percentage on the actuarial value of assets has ranged from a low of 21.5% to a high of 31.7% since 2009.

➤ Maturity Measures

As pension plans mature, the cash need to fulfill benefit obligations will increase over time. Therefore, cash flow projections and analysis should be performed to assure that the Pension System's asset allocation is aligned to meet emerging pension liabilities.

Currently the Pension System has a non-active to active participant ratio of 3.00. For the prior year administrative expenses and benefits paid were \$93,808 less than contributions received. As the Pension System matures, more cash will be needed from the investment portfolio to meet benefit payments.

Section 3: Supplemental Information

EXHIBIT A – TABLE OF PLAN COVERAGE

Category	Year Ended June 30		Change From Prior Year
	2019	2018	
Active participants in valuation:			
• Number	66	68	-2.9%
• Average age	46.3	45.5	0.8
• Average years of service	17.8	16.8	1.0
• Total payroll	\$6,780,172	\$6,810,010	-0.4%
• Average payroll	102,730	100,147	2.6%
• Account balances	5,482,121	5,178,753	5.9%
• Total active vested participants	61	63	-3.2%
Retired participants*:			
• Number in pay status	129	128	0.8%
• Average age	61.9	60.9	1.0
• Average monthly benefit	\$4,106	\$4,171	-1.6%
Disabled participants:			
• Number in pay status	49	50	-2.0%
• Average age	60.4	59.6	0.8
• Average monthly benefit	\$3,895	\$3,928	-0.8%
Beneficiaries:			
• Number in pay status	20	18	11.1%
• Average age	71.4	71.0	0.4
• Average monthly benefit	\$2,392	\$2,265	5.6%

*Includes alternate payees receiving benefits subject to a QDRO.

Number as of June 30, 2019	66	49	129	20	264

¹The data includes one new former spouse receiving benefit under qualified domestic relations orders (QDROs).

EXHIBIT D – SUMMARY STATEMENT OF INCOME AND EXPENSES ON A MARKET VALUE BASIS

	Year Ended June 30, 2019	Year Ended June 30, 2018
Net assets at market value at the beginning of the year	\$44,046,131	\$40,869,495
Contribution income:		
• Employer contributions	\$9,017,650	\$8,756,200
• Employer contributions	485,348	524,044
• Purchase of service contributions	37,077	4,215
• Less administrative expenses	<u>-132,348</u>	<u>-146,220</u>
<i>Net contribution income</i>	<i>\$9,407,727</i>	<i>\$9,138,239</i>
Investment income:	<u><i>\$1,622,294</i></u>	<u><i>\$3,326,607</i></u>
Total income available for benefits	\$11,030,021	\$12,464,846
Less benefit payments	-\$9,313,919	-\$9,288,210
Change in reserve for future benefits	\$1,716,102	\$3,176,636
Net assets at actuarial and market value at the end of the year	\$45,762,233	\$44,046,131

EXHIBIT E – DEVELOPMENT OF THE FUND THROUGH JUNE 30, 2019

Year Ended June 30	Employer Contributions ¹	Employee Contributions ²	Net Investment Return ³	Admin. Expenses ⁴	Benefit Payments ⁵	Market Value of Assets at Year-End
2010	\$6,609,967	\$733,959	\$3,841,298	\$3,760	\$6,375,551	\$36,480,656
2011	3,785,547	603,274	7,463,380	3,800	6,519,908	41,809,149
2012	3,124,957	972,481	-218,756	3,495	7,973,177	37,711,159
2013	3,118,405	653,668	3,841,617	0	7,457,405	37,867,444
2014	5,417,483	726,409	5,529,774	254,635	7,964,640	41,321,835
2015	5,406,640	683,874	341,030	142,000	8,172,227	39,439,152
2016	5,360,260	627,636	50,542	155,657	8,586,915	36,735,018
2017	8,721,128	612,207	4,037,715	168,314	9,068,259	40,869,495
2018	8,756,200	528,259	3,326,607	146,220	9,288,210	44,046,131
2019	9,017,650	522,425	1,622,294	132,348	9,313,919	45,762,233

¹Includes employer contribution for claims and judgment

²Includes single premium deferred annuities and purchase of service

³Net of investment fees

⁴Through 2013, only reflects ING account balance maintenance fees

⁵Includes refunds service buybacks

EXHIBIT F – SCHEDULE OF ACTUARIALLY DETERMINED CONTRIBUTIONS

Actuarially Determined Contributions			
Year Ended Error! Bookmark not defined.:	Combined	Police	Firefighters
2020	\$9,288,180	\$4,999,713	\$4,288,467
2021	9,566,825	5,149,705	4,417,120
2022	9,853,830	5,304,196	4,549,634
2023	10,149,445	5,463,322	4,686,123
2024	10,453,928	5,627,221	4,826,707
2025	10,767,546	5,796,038	4,971,508
2026	11,090,572	5,969,919	5,120,653
2027	11,423,289	6,149,017	5,274,272
2028	11,765,988	6,333,487	5,432,501
2029	12,118,968	6,523,492	5,595,476

2032	13,242,723	7,128,396	6,114,327
2033	13,640,005	7,342,248	6,297,757
2034	14,049,205	7,562,515	6,486,690
2035	14,470,681	7,789,391	6,681,290
2036	14,904,801	8,023,072	6,881,729
2037	15,351,945	8,263,764	7,088,181
2038	15,812,504	8,511,677	7,300,827
2039	16,286,879	8,767,028	7,519,851

EXHIBIT G – DEFINITION OF PENSION TERMS

The following list defines certain technical terms for the convenience of the reader:

Actuarial Accrued Liability for Actives:	The equivalent of the accumulated normal costs allocated to the years before the valuation date.
Actuarial Accrued Liability for Pensioners and Beneficiaries:	The single-sum value of lifetime benefits to existing pensioners and beneficiaries. This sum takes account of life expectancies appropriate to the ages of the annuitants and the interest that the sum is expected to earn before it is entirely paid out in benefits.
Actuarial Cost Method:	A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarially determined contribution.
Actuarial Gain or Loss:	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield in actuarial liabilities that are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.
Actuarially Equivalent:	Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial Present Value (APV):	The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is: Adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.) Multiplied by the probability of the occurrence of an event (such as survival, death, disability, withdrawal, etc.) on which the payment is conditioned, and Discounted according to an assumed rate (or rates) of return to reflect the time value of money.

Actuarial Present Value of Future Plan Benefits:	The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial Valuation:	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB, such as the Actuarially Determined Contribution (ADC) and the Net Pension Liability (NPL).
Actuarial Value of Assets (AVA):	The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.
Actuarially Determined:	Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.
Actuarially Determined Contribution (ADC):	The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.
Amortization Method:	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.
Amortization Payment:	The portion of the pension plan contribution, or ADC, that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Assumptions or Actuarial Assumptions:	The estimates upon which the cost of the Fund is calculated, including: <u>Investment return</u> - the rate of investment yield that the Fund will earn over the long-term future; <u>Mortality rates</u> - the death rates of employees and pensioners; life expectancy is based on these rates; <u>Retirement rates</u> - the rate or probability of retirement at a given age or service; <u>Disability rates</u> - the probability of disability retirement at a given age; <u>Withdrawal rates</u> - the rates at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement; <u>Salary increase rates</u> - the rates of salary increase due to inflation and productivity growth.
Closed Amortization Period:	A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Open Amortization Period.
Decrements:	Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or withdrawal.
Defined Benefit Plan:	A retirement plan in which benefits are defined by a formula applied to the member's compensation and/or years of service.
Defined Contribution Plan:	A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.
Employer Normal Cost:	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Experience Study:	A periodic review and analysis of the actual experience of the Fund that may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.
Funded Ratio:	The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA.

GASB 67 and GASB 68:	Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.
Investment Return:	The rate of earnings of the Fund from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.
Net Pension Liability (NPL):	The Net Pension Liability is equal to the Total Pension Liability minus the Plan Fiduciary Net Position.
Normal Cost:	That portion of the Actuarial Present Value of pension plan benefits and expenses allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated.
Open Amortization Period:	An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period with level percentage of payroll is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never decrease, but will become smaller each year, in relation to covered payroll, if the actuarial assumptions are realized.
Plan Fiduciary Net Position:	Market value of assets.
Total Pension Liability (TPL):	The actuarial accrued liability under the entry age normal cost method and based on the blended discount rate as described in GASB 67 and 68.
Unfunded Actuarial Accrued Liability:	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.
Valuation Date or Actuarial Valuation Date:	The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.

Section 4: Actuarial Valuation Basis

EXHIBIT I – ACTUARIAL ASSUMPTIONS AND ACTUARIAL COST METHOD

Rationale for Assumptions	The information and analysis used in selecting each demographic assumption that has a significant effect on this actuarial valuation is shown in the Actuarial Experience Review July 1, 2014 to June 30, 2017 dated November 30, 2017. Please see this study for the rationale for each assumption used. As noted in this study, due to the low number of participants in the Police and Firefighters System, the mortality experience is not credible. It is our understanding that the State of Rhode Island deems the mortality assumptions reasonable if they match the assumptions used for the State of Rhode Island Municipal Employees Retirement System (MERS). Therefore, the mortality assumptions shown below match the MERS assumptions used.
Net Investment Return:	7.25% The net investment return assumption is a long-term estimate derived from historical data, current and recent market expectations, and professional judgment. As part of the analysis, a building block approach was used that reflects inflation expectations and anticipated risk premiums for each of the portfolio's asset classes as well as the System's target asset allocation.
Inflation:	2.50%
Salary Increases:	3.75%; including 2.50% for inflationary increases, 0.50% for productivity increases and 0.75% for promotional and longevity increases.
Cost-of-Living Adjustments:	0% through June 30, 2022; 1.25% compounded annually commencing July 1, 2022.
Mortality Rates:	
<i>Pre-retirement:</i>	RP-2014 Employee Mortality Table
<i>Healthy annuitants:</i>	Male: RP-2014 Blue Collar Healthy Annuitant Mortality Table for males, projected generationally with Scale MP-2016 Female: RP-2014 Healthy Annuitant Mortality Table for females, projected generationally with Scale MP-2016
<i>Disabled annuitants:</i>	RP-2014 Disabled Retiree Mortality Table, projected generationally with Scale MP-2016

Annuitant Mortality Rates:

Age	Rate (%)			
	Healthy ¹		Disabled ¹	
	Male	Female	Male	Female
55	0.60%	0.36%	2.34%	1.45%
60	0.85	0.52	2.66	1.70
65	1.26	0.80	3.17	2.09
70	1.97	1.29	4.03	2.82
75	3.15	2.09	5.43	4.10
80	5.19	3.48	7.66	6.10
85	8.68	6.05	11.33	9.04
90	14.64	10.71	17.30	13.27

¹Rates shown do not include generational projection.

Note: 100% of deaths and disabilities are assumed to be service related.

Retirement Rates:	Police		Firefighters	
	Years of Service	Retirement Probability	Years of Service	Retirement Probability
	18-20	25%	20	75%
	21-22	35%	21-25	50%
	23-24	50%	26 or more	100%
	25 or more	100%		
	<i>All employees are assumed to retire no later than age 65.</i>			
Description of Weighted Average Retirement Age:	Age 50.6, determined as follows: The weighted average retirement age for each participant is calculated as the sum of the product of each potential current or future retirement age times the probability of surviving from current age to that age and then retiring at that age, assuming no other decrements. The overall weighted retirement age is the average of the individual retirement ages based on all the active participants included in the June 30, 2018 actuarial valuation.			
Percent Married:	85% of all active and retired police officers are assumed to be married.			
Age of Spouse:	Females are assumed to be three years younger than males, unless dates of birth are provided.			
Administrative Expenses:	Administrative expenses are assumed to be \$87,500, payable as of the beginning of the year.			
Amortization Method:	Each year, the amortization payment is determined by subtracting the employer normal cost from the required contribution under the settlement agreement. The effective amortization period is then determined from the current unfunded actuarial accrued liability and the calculated amortization payment based on the System's funding interest rate and assuming the payment will increase 3.00% annually.			
Actuarial Value of Assets:	At market value.			
Actuarial Cost Method:	Entry Age Actuarial Cost Method. Entry Age is current age minus years of service. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis and are allocated by salary, with Normal Cost determined using the plan of benefits applicable to each participant.			
Justification for Changes in Actuarial Assumptions:	There have been no changes in actuarial assumptions since the last valuation.			

EXHIBIT II-A – SUMMARY OF PLAN PROVISIONS FOR POLICE

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Plan Year:	July 1 through June 30																												
Plan Status:	Closed to new entrants as of July 1, 2010																												
Normal Retirement:																													
<i>Eligibility</i>	18 years of service																												
<i>Amount</i>	The annual benefit at retirement is equal to the percentage of final salary specified in the table below. For pension purposes, final average salary is a three-year average of pay which is documented on the W-2 tax form, except monies paid to the Town of Johnston which were funded by private companies to hire officers for non-municipal detail assignments and the officer's gun/qualification allowance, with overtime limited to \$35,000 each year.

<i>Commencement Date</i>	Retirement benefits commence as of the first payroll period after retirement.																												

Service Related Disability:	
<i>Eligibility</i>	Retirement because of a job related mental or physical incapacity
<i>Amount</i>	66 2/3% of final salary
<i>Commencement Date</i>	Benefits commence as of the first payroll period after disability
Vesting:	
<i>Eligibility</i>	Upon termination of employment after 10 years of service a member is eligible for a benefit deferred to retirement age.
<i>Benefit Formula</i>	25% of final salary at termination plus cumulative COLA. Member may waive right to deferred retirement benefit in return for refund of employee and employer contribution account.
<i>Commencement Date</i>	21 st anniversary of employment for deferred annuity. Immediate payment for refund.
Spouse's Pre-Retirement Death Benefit	
<i>Eligibility</i>	Death while actively employed
<i>Benefit Formula</i>	Surviving spouse (or if none, dependent children) receives benefit of 50% of final salary (30% of final salary for non-service related death)
<i>Commencement Date</i>	Benefits commence as of the first payroll period after death
Retiree Cost-Of-Living Increases:	Between July 1, 2017 and June 30, 2022, the COLA is suspended. Commencing July 1, 2022 the annual COLA will be 1.25%, compounded annually.
Military Service Purchase:	A member may purchase up to two years of pension service credit for prior military service by contributing 6% of pay at any time prior to retirement, for each year purchased.
Employee Contributions:	8% of pensionable earnings. Employees terminating before retirement may withdraw the employee-provided account and forfeit their right to pension benefits.
Eligibility:	All members of the Police Department hired before July 1, 2010 (members hired after this date are participants in the Rhode Island Municipal Employees Retirement System).
Optional Forms of Payment:	All single participants receive a life annuity. All married participants receive a fully subsidized 67.5% joint and survivor annuity. There are no optional forms of payment.
Employer Contributions:	The Town of Johnston adopted a policy such that the scheduled contribution is at least \$4,575,446 for the fiscal year ending June 30, 2017, with this amount to be increased 3.00% annually.
Changes in Plan Provisions:	There have been no changes in plan provisions since the last valuation.

EXHIBIT II-B – SUMMARY OF PLAN PROVISIONS FOR FIREFIGHTERS

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Plan Year:	July 1 through June 30																								
Plan Status:	Closed to new entrants as of July 1, 1999																								
Normal Retirement:																									
<i>Eligibility</i>	20 years of service																								
<i>Amount</i>	The annual benefit at retirement is equal to the percentage of final average salary specified in the table below. For pension purposes, final average salary is a three-year average of pay comprising base, holiday and longevity pay and up to \$35,000 of overtime pay.																								
	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr style="background-color: #0070c0; color: white;"> <th>Years of Service</th> <th>Benefit as a Percentage of Final Average Salary</th> </tr> </thead> <tbody> <tr><td style="text-align: center;">20</td><td style="text-align: center;">50.0%</td></tr> <tr><td style="text-align: center;">21</td><td style="text-align: center;">52.5</td></tr> <tr><td style="text-align: center;">22</td><td style="text-align: center;">55.0</td></tr> <tr><td style="text-align: center;">23</td><td style="text-align: center;">57.5</td></tr> <tr><td style="text-align: center;">24</td><td style="text-align: center;">60.0</td></tr> <tr><td style="text-align: center;">25</td><td style="text-align: center;">62.5</td></tr> <tr><td style="text-align: center;">26</td><td style="text-align: center;">65.0</td></tr> <tr><td style="text-align: center;">27</td><td style="text-align: center;">67.5</td></tr> <tr><td style="text-align: center;">28</td><td style="text-align: center;">70.0</td></tr> <tr><td style="text-align: center;">29</td><td style="text-align: center;">72.5</td></tr> <tr><td style="text-align: center;">30 or more</td><td style="text-align: center;">75.0</td></tr> </tbody> </table>	Years of Service	Benefit as a Percentage of Final Average Salary	20	50.0%	21	52.5	22	55.0	23	57.5	24	60.0	25	62.5	26	65.0	27	67.5	28	70.0	29	72.5	30 or more	75.0
